- 900
- 1200
- 1500
- 1800
- 2100
- 2400

GALV. BRACKET

Product information

This unit is specifically designed for use where the plumbing originates from below the line of the trough. It's most common use is in schools as a wash up trough, or with rear bubblers as a multi student drinking fountain, but is easily adapted for use in any application.

The front radius corners eliminate sharp edges and provide protection against personal injury.
